

BSc (Hons) Information Systems & Management

The study of information systems relates to how organizations and societies use and exploit new information and communication technologies (ICT). Emphasis is on the organizational and societal aspects of the efforts organizations make in order to accommodate ICT, change their practices, and achieve benefits.

Who is it for?

- Students interested in a career in information systems management.
- The degree is likely to give you a distinct advantage with all kinds of public and private organizations.
- It would be useful if you want to work for any of the software houses or in systems management.
- Successful graduates could also consider a career in management consultancy specializing in IT & IS.

Features of the Degree

This degree is particularly focused on how computers are used within business and administrative organizations. It is natural, therefore, to combine the study of information systems with the study of management in equal doses. This degree is structured to mesh the academic knowledge and not a combination of two disparate disciplines into a degree programme. Students are exposed to the organization and its mechanisms clearly defining the impact of IS in the modern organization.

Foundation courses

1. **IS1060** Introduction to information systems
2. **MN1107** Introduction to business & management
3. **IS1168** Introduction to computer systems architecture and programming
